

Please

Scoop the poop

to protect our water and keep our neighborhoods clean

We ❤️ dogs!

But, dog poop can carry dangerous bacteria and parasites. When it washes off of streets and into storm drains, it pollutes lakes and rivers.

In some urban areas, as much as 20% of water-borne bacteria comes from pet waste. Nutrients in the poop also feed algae, which make our lakes and rivers turn green in the summer.

Do your part to protect our water and keep our neighborhoods clean! Always bring a bag when you walk your dog, and practice bending, scooping, and bagging until you can pick up like a pro.
